Escape from Bitcoin Farm Tarkov: Is the Bitcoin Farm Tarkov Worth it?

Original:

<https://www.btcc.com/en-US/academy/research-analysis/escape-from-bitcoin-farm-tarkov-is-the-bitcoin-farm-tarkov-worth-it>

Many players regard the Escape From Tarkov [Bitcoin](#) Farm as the ultimate aim for their Hides, as it can generate a passive income stream that could be worth millions of Roubles. In Escape From Tarkov, cash is king, as it ensures that you can always replace your gear and weapons if they are destroyed. If you're wondering if buying Escape From Tarkov is a good idea, you should keep reading.

Escape from Bitcoin Farm Tarkov, Explained

If you're not familiar with Escape From Tarkov but would like to mine Bitcoins without the game's heavy environmental impact or the exorbitant GPU costs, the Bitcoin Farm Hideout addon is for you.

It takes Graphics Processing Units (GPUs) as input and outputs a fraction of a Bitcoin (0.2 BTC) every couple of hours. It's the last thing you'll want to construct in your Hideout because of how costly it is, but it's always been the secret to guaranteeing a substantial passive income stream.

Check out our Escape From Tarkov Hideout items list for specifics on what you'll need to construct the Bitcoin Farm from Escape From Tarkov.

Is it Worth Doing Bitcoin Farm Tarkov?

If you're curious about whether or not the Escape From Tarkov Bitcoin Farm is worthwhile currently, the answer is typically negative unless you get in on it before the price of bitcoin drops.

The biggest problem with the perceived value of the Escape from Tarkov Bitcoin Farm is the connection between the real-world Bitcoin price and the price in Tarkov, as well as the fact that the Bitcoin (0.2 BTC) is one of the banned commodities in the Escape from Tarkov flea market. To demonstrate their commitment to realism, Battlestate Games has pegged the value of Tarkov currency to that of real-world dollars, roubles, and bitcoin.

When the value of the Rouble plummeted at the beginning of 2022, the in-game dollar rose in value, making some things much more expensive. Similarly, the real-world decrease in Bitcoin's value has had a significant impact on the game's Bitcoin pricing. As a result, the cost of Graphics Cards has gone down, as their primary application was the Bitcoin Farm, but most people will still find the Hideout module to be overpriced for their needs.

It should be noted that all of this data is based on the current in-game costs of a Graphics Card (320,000) and Bitcoin (121,000). The Bitcoin Farm necessitates the Generator to be running constantly in order to be producing money, so you can include the cost of fuel if you like; however, we will ignore it in our calculations because we can use the greatest crafts from Escape From Tarkov to make money at the same time.

We can see that the Roubles per hour (not profit) generated from the Bitcoin farm, using the Tarkov Bitcoin Farm Calculator, range from 5,007 to 17,572, depending on the number of GPUs you have installed.

The added GPUs boost manufacturing speed, resulting in a shorter turnaround time (24 hours versus 7), and thus higher profits.

However, the price of the upgrades and the GPUs you'll need to reach this maximum should be taken into account. Considering the current price of Graphics Cards at around 16,000,000 for 50, you would need to produce Bitcoin continuously for little under 38 days to break even.

The cost of upgrading the Hideout module to the level that allows you to have all 50 installed is an additional \$3,201,587, and this doesn't even take into consideration the implicit cost of the other necessary modules. This increases the required break even period to 60 days, or almost a third of an

Escape From Tarkov reset.

Since it takes the typical Escape from Tarkov player at least two months to save up enough money and resources to construct the Bitcoin Farm, they won't be able to make any money off of it for the first two-thirds of the wipe cycle. After this, you will be making around 420,000 JPY per day, but twenty million yen is a long time to lose.

To put this in perspective, back in March 2022, when Bitcoin was at 400,000 and Graphics Cards were around 468,000, it would have taken you a mere 17 days to break even on the GPU price at full capacity, and you would have been making just about 1,400,000 daily, which is a lot of money in Tarkov.

The Escape From Tarkov Bitcoin Farm is still certainly worthwhile if you have a lot of money, and especially if you finish it early, but you need give a lot more consideration to the investment cost and how much of the wipe you have left today.

This concludes our walkthrough of the Bitcoin Farm in Escape from Tarkov, where we covered all you needed to know in order to successfully create the Hideout expansion. Just in case you've decided to take the plunge, here's a rundown of the top firearms in Escape From Tarkov so you can put your hard-earned cash to good use.
