IMPT Presale: Nearly \$2,000,000 Raised in 4 Days for IMPT

Original:

<https://www.btcc.com/en-US/academy/research-analysis/impt-presale-nearly-2000000-raised-in-4-days-for-impt>

At the start of the month, there was tremendous optimism in the [cryptocurrency](#) market due to the expectation that October may bring large increases, as it typically did. [Cryptocurrency](#) prices have yet to fully recover from the bad market of this year, though, so this story isn't playing out.

Despite the bad market, shrewd investors are constantly on the lookout for the next great cryptocurrency. [IMPT](#) is a good example of a crypto like this. Right now, [IMPT](#) is experiencing one of its most successful pre-sales ever.

Nearly \$2 million was raised in the IMPT presale

About four days ago, the IMPT token was made available to investors, but it has already begun to dominate the market due to the overwhelming interest in the venture. As of this writing, IMPT's current pre-sale has raised over \$1 million, with a goal of \$2 million still in sight.

The money raised so far puts the IMPT presale within a tenth of its goal. The presale is limited at \$10.8 million. There will be a total of three phases, with the first one beginning now. IMPT's website will allow you to take part in the pre-sale.

Beginning on October 3, 2022, the presale began, and it has already been a huge success. At the end of the first day of the presale, \$250,000 had been collected. IMPT is now being sold at a preliminary stage of the presale for \$0.018. The current rate of the presale suggests that the remaining tokens could be sold out in under a month.

Possible significant benefits from IMPT

The recent surge in IMPT's popularity is evidence that investors believe it has what it takes to become the next big thing in the cryptocurrency market. Impact Project's native token, or IMPT, is used throughout the ecosystem. The company's whitepaper states, "any individual and organization offset their carbon impact in an easy and secure way."

To achieve its objectives, the Impact Project will utilize both its own IMPT token and a tokenization platform for carbon credits. Non-fungible tokens([NFTs](#)) can be created using carbon credit data.

Carbon credit exchanges based on NFTs are also provided through the Impact Project. Businesses and people who take action to reduce their carbon footprint can participate in the project and reap financial benefits as a result of their efforts.

This project has all the makings of the next big thing in the crypto scene, thanks to its robust foundations. There are hundreds of other sustainability-oriented projects working with this one.

It's worth noting that several major retailers are concentrating on increasing their share of eco-friendly goods. Carbon credits will so become available to platform users as the project proceeds to obtain new partnerships. Carbon credits are available for users to purchase or acquire through the site.

The fact that the Ethereum blockchain is being used in the Impact Project is also quite interesting. When Ethereum made the switch to a proof-of-stake consensus last month, it cut its energy consumption by 99 percent.

Non-tradable tokens are now a part of the Impact Project as well (NFTs). Carbon credits purchased by users on the platform will be converted into NFTs and tokenized upon their acquisition. This safeguards against wasting carbon credits twice.
