What is Numeraire (NMR)?

With an average annual return of 66% since its inception, the Medallion Fund is widely considered to be among the greatest funds available. Renaissance Technologies was founded by Jim Simons, a mathematician who used mathematical models and algorithms to construct a successful investment fund. In 2015, Richard Craib, the man of the platform Numeraire, established Numeraire in San Francisco.

You might think of Numeraire crypto as a piece of software that functions like a hedge fund and allows you to trade equities on the Ethereum Blockchain, and that's a really good way to explain what it is. Giving the user an incentive to trade based on market predictions made with the help of AI, IR, and ML.

The Erasure protocol is a recent addition to the Numeraire ecosystem's architecture, and it is used to reward the staking user. The protocol awards NMR tokens to the user if they select the optimal forecast model. Erasure will destroy the user's staked NMR crypto if they bet against the correct forecast model. The "Meta Model" programme performs the function of an AI aggregator and employs algorithmic trading.

The Numerai acts as a hedge fund and makes stock trades based on the predictions made by all of the models posted on the platform. All transactions take place on the stock exchange, and the NMR cryptocurrency is awarded to the developers of accurate prediction models.

Numeraire's native money, NMR tokens, are continuously issued and destroyed, but there will never be more than 11 million NMR in circulation. The Numeraire platform, which is utilised for staking and rewarding the user, revolves around this NMR.
