## What is Polymath (POLY) ?

Polymath is a blockchain platform for the issuance and investment of security tokens. Polymath constructed a custom blockchain (named Polymesh) to meet the unique needs and security standards of security tokens. Create, issue, and administer blockchain-based digital securities with Polymesh.

Polymesh operates on nominated Proof-of-Stakes consensus with the finality device GRANDPA and token protocol POLYX. Polymath is a one-stop platform to design your security token, access network trusted partners such as legal firm KYC providers, issue your complaint security token, and lastly manage your security token with fast and easy issuance.

POLY is the ERC-20 token of Polymath that was released on the Ethereum network. There is a total of 1 billion POLY tokens available, and they are all listed and actively traded on various cryptocurrency platforms. Polymath's native protocol token, POLYX, is what keeps the platform running, hence the POLY token must be worth something in and of itself. As a result, an Upgrade Bridge allows POLY token holders to exchange their tokens for POLYX at a rate of 1:1. POLYX was formed under the auspices of the Swiss financial authority FINMA.

In order to pay for block rewards, the total amount of POLYX in circulation is increasing and is not static. POLYX is used to pay the network transaction fees (gas fee), developer fees, and administrative expenses. In addition, by associating a fee in POLYX with chain transactions, network spamming is mitigated. Nominators stake POLYX on validators, and validators stake POLYX on networks and run authoring nodes. In exchange for adding blocks to the chain and completing nodes, both parties will receive compensation.

## Will Polymath (POLY) Hit \$10?

Many cryptocurrency investors are wondering if Polymath can reach a \$10 cap as the project develops. By 2021, Polymath has already earned more than a dollar. If we measure the old performance, we may say that Polymath has the capacity to meet the target of \$10. Our Polymath long-term model indicates that if present growth rates are maintained, the price could reach \$10 between 2029 and 2030.

The Polymath project is fantastic and has practical applications. Indeed, the cryptocurrency market is an unpredictable place. It's not easy to suggest that price predictions can be correct given that we know from experience that a huge bull run or bear rally can obliterate all the projections in seconds. If more investors are drawn to the Polymath project the price of Polymath can surge and it may attain its \$10 target before our Polymath token estimate.
